What's New In?

With Markup Import, you can rapidly import paper notes or comments directly into your AutoCAD drawings. It brings clarity to the project, as you don't have to go back and forth between the paper and drawing file. You can now quickly translate important design details into your AutoCAD drawings. Like other Markups, it's very easy to use and intuitive. Once you've inserted the comments or notes into a block, you can simply right-click the block and select "Import Markups" to import them into the current drawing. We're also excited to see this in the next version: Bring your paper notes to life in 3D! Using Markup Assist, you can bring any paper notes into a 3D model in Autodesk's digital design software. Easy commands and validation: Stay focused on design and get back to the drawing table quickly with fewer steps. You can now easily copy, paste and move commands. We have simplified many drawing steps. And we have a number of tools that can help you quickly validate and validate commands. The RunCommandValidation tool runs all the commands that were executed from the Command Line, to help you to validate the commands before you actually execute them. We have simplified dialog boxes, so they're more intuitive. And we have reorganized toolbars, so you can find commands that are often used together. We've added a flag to the AutoCAD Command Dialog Box, which tells you if a command executes or not. Command Line Validation: We've removed the AutoCAD Command Line window and made the validation results more visible. You can now see the results of your commands when you execute them from the command line, from any model window. There are now three results of the Command Line Validation; When you run a command in the command line, the validation status appears in the Status bar. When you execute commands from the command line, the validation status is shown in the top left corner of the command line window, on the status bar. If a command executes successfully, the "OK" symbol appears in the command line window, in the status bar. For each command that is run, the last error that occurred is shown in the command line window
