The video is streamed wirelessly from your notebook, with the help of Intel Remote Display technology and an 802.11n wireless adaptor, to the TV

---

or to any other HDTV, which is connected to the 802.11n wireless adaptor.

The fact that there is no direct cable connection to the HDTV makes it really easy to use and the simultaneous streaming of high-definition video and audio, as well as the ability to surf the Internet from the comfort of your couch, definitely make this product appealing. The biggest

---

drawback of this particular application is the fact that the price is high. So, if you don't have any HDTV, you should definitely be more than happy with your WiDi application and the technology powering the app. Features: - Streaming video from a notebook to an HDTV - Stream audio from a notebook to an HDTV - Multimedia applications can be used on the TV with

KEYMACRO allows you to create your own custom hotkey to speed up your work. KEYMACRO (Windows): glutamate in the epileptic brain of the humanized FYN-TREX mice. Fyn-tyrosine kinase interacts with the common subunit of the adaptor proteins Tir and TRIM8, and plays a role in neuronal migration and axonal growth. Fyn-deficient mice show

---

epilepsy, progressive neurodegeneration, and widespread axonopathy.

Based on these mouse findings, FYN has been suggested to play a role in brain malformation and epilepsy in humans. In order to validate these ideas, we studied the expression of FYN in the brains of patients with idiopathic epilepsy and patients with tuberous sclerosis. Tissue sections of

---

brain biopsies of epilepsy patients (n = 6), as well as of tuberous sclerosis patients (n = 3) and control patients (n = 3), were immunostained with anti-FYN antibodies. Double immunofluorescence staining was performed with antibodies against the pan-neuronal marker NeuN and the non-neuronal marker CD68. All patients showed immunoreactivity for FYN in the brain. Within the

---

epileptic brain, neuronal cells and infiltrating macrophages revealed intense labeling for FYN. Surprisingly, CD68-positive macrophages in the epileptic brain showed intense FYN labeling as well, whereas in control brains and in the brains of patients with tuberous sclerosis, only a weak labeling for FYN was detectable in the brain parenchyma. These results

---

reveal that FYN expression is altered in the brains of patients with epilepsy and a high level of FYN expression is detectable in macrophages infiltrating the epileptic brain. is made to be the easiest and most comfortable way to do what you want to do. Video is currently only

---

supported by HDMI connected monitors, however WiDi 3.0 will include support for VGA displays connected by DisplayPort or DVI and will also add support for DisplayPort connected displays. Intel Wireless Display also allows you to select the monitor resolution, the color space, color depth, etc. in a custom way, so there is a lot of flexibility to

---

do what you want. First, open up the Intel Wireless Display setup wizard and click Next. Choose the system you are using (32-bit or 64-bit). The connected devices should be identified by their brand and model. Make sure the device is on and then click next. Do a search for your device if you are not sure what it is. After that, you will need to download the Intel Wireless

---

Display setup app. This is a fairly large app, so you can download it via the download manager provided in your browser (for example, in Chrome, you can press CTRL and H to open the download manager). After the download is complete, you will need to extract it. Once the Intel Wireless Display setup app is extracted, you will see an option to launch

---

the app for the first time. Click the option to open the app. It should ask you to confirm that you want to use the Intel Wireless Display app. If you have already setup the application, there is nothing else to do. If you have not set up the Intel Wireless Display, then a setup wizard should appear. This wizard allows you to select the settings that you want to use
