I got Rufus Portable v2.0.877 and tried to run it. The situation is quite strange. When I try to run rufus.exe the message shows up. I have changed the target machine to the 64 bit. However, I can not run this Portable version. have no idea what to do. How I understand the error message it's not connected with the target machine configuration. I think it's connected with the Windows version. Message says "Error: Unable to access rufus folder. This may happen if you don't have write permissions to the drive" I'm currently on the latest Windows 7 64 bit and haven't had this issue. rufus is the best way to create your live USB drive from my experience. You might try changing the target drive to a different location. If you have it selected from the Start menu, you can select from the list at the bottom of the screen. Otherwise, you can find it by typing

\Device\HarddiskDriveX into the start menu. You may also try installing the latest rufus and trying it from the Run prompt. See for instructions.

Interesting, Rufus Portable v2.0.877 can be downloaded from the homepage of the above link: Rufus Portable is a really great tool for creating a Live USB with different versions of Windows. No matter which Windows version you want to create the USB in, you can choose from different boot files, file system, drivers, language and much more. I noticed that, Windows 7 has a built-in disk boot manager called MBR. But I need to use the GPT in this case. That's why I need to use MBR. Maybe, GPT disk could not work on Windows 7. When I had installed it, it could not access the new GPT disk. There is an option in Rufus Portable to change the disk boot manager from MBR to GPT. But I don't know how to do it. That's why, I have upgraded the Windows version from Windows 8.1 to Windows 7. Now, I can create the GPT disk and install Rufus Portable v2.0.877 again. It can now work well.
