Users can either create 2D drawings or connect drawings to drawings together. The Autodesk product line is a comprehensive suite of CAD applications. The new software was built on the latest version of the AutoLISP language, so the user interface (UI) was enhanced to match the look and feel of Microsoft Windows. AutoCAD version 2014 (v14) was released in 2013. AutoCAD R14 comes with a toolbox of 10 commands. It has 116 drawing commands, 65 system commands, 81 import commands, and 65 export commands. It includes 10 sub-programs and 18 command libraries. AutoCAD 2014 comes with a new command-driven user interface. The drawing canvas can be split into the main window and the drawing area. The drawing area is used to draw objects. The main window provides control over the viewing of the drawing. The current drawing is displayed in the drawing area; you can create a new drawing in the drawing area or you can open an existing drawing. The drawing area and the main window can be split into multiple areas. For example, you can see the current drawing in the center of the drawing area, view documents and tools in the right side of the drawing area, view auxiliary drawing windows in the left side of the drawing area, and view the status bar in the bottom of the drawing area. (Source: Autodesk) The software provides a wide range of drawing commands and tools for creating technical drawings. Users can draw objects using the 3D and 2D drafting tools in the drawing area and create the appearance of those objects using the drawing commands and drawing properties. Use Cases AutoCAD is designed to allow users to perform some tasks in the software quickly and efficiently. The following is an example of how AutoCAD

The full version of AutoCAD LT can be downloaded for free. The free version includes its own scripting language and several command line tools, but is limited to in-memory work. AutoCAD LT scripting The scripting language of AutoCAD LT has over 150 commands, and approximately 1,000 variables. The language is similar to AutoLISP and Visual LISP. AutoCAD LT scripting is very similar to AutoLISP. Commands are available that execute scripts, or run a script repeatedly. For instance, to copy objects, scripts can be run to specify the number of copies, the number of layers and the destination. Scripts can also be run to open a file and copy and paste information from that file to a new drawing. Additionally, scripts can be used to convert entities between different formats, such as the linetype for each object, or to create objects based on a profile. AutoCAD LT also supports variables, which are accessible to a script and can be used to store information. A user can program several scripts and run them from a menu. AutoCAD LT user interface AutoCAD LT includes a command line interface (CLI) that allows scripts to interact with AutoCAD by using any of the commands available. To use the command line, one
