The average recoveries of the six essential amino acids were between 93. 0% and 104.6%. The values of the six amino acids in Xingrenbaidu tablets are not lower than the standard limits, indicating that the methods for determination of amino acids in Xingrenbaidu can be accepted. The role of allele-specific PCR in the detection of Shiga toxin-producing Escherichia coli O157:H7: a ten-year retrospective study. In the UK and many other countries Shiga toxin-producing Escherichia coli (STEC) serogroups are the main cause of serious foodborne disease, leading to food recalls. A decrease in the incidence of O157 STEC has been observed over the past decade, suggesting that diagnostic tests must be improved. Recent studies have shown that ST 0cc13bf012
