However, thanks to the Dreamcast's limited hardware capabilities, the overall gameplay was still a bit primitive and was only able to display a 2D environment without the use of vivid graphical effects. Nevertheless, with the Dreamcast's superior hardware having achieved their peak, the game's graphics and the gameplay were remarkably improved compared to the original work. Additionally, the game has achieved a wide audience and is one of SEGA's best-selling titles on the Dreamcast. "The Elden Ring" was released in Japan in March 2001. In May 2001, it was announced that the game was finally released in North America in November 2001. The Japanese version was released without its music, considering it to be too good to be replaced. The game is centered on Tarn Smith, a young man whose mother was kidnapped by the faceless, evil organization known as ARAG. While Tarn is in mourning, he comes across a blade that changes into the shape of a ring. After some time, Tarn becomes a fugitive from the law, and uses a sword to traverse the world by jumping into the air and swinging it around, using Tarn's new role as a great sword (an amalgam of the dual blades) to battle. By obtaining an item known as the Eyes of Cithrin, Tarn then gets the chance to prove himself as an exorcist. Along the way, he will meet many new allies and enemies. Q: What is PEP 8? PEP 8 is a style guide for the Python programming language, and is part of the official Python reference documentation. What does it mean exactly? What's the point of coding according to it if the standard libraries don't use it? A: It's the official style guide, which leaves the burden on the programmer to maintain (or improve) his/her code according to conventions. Say you have some function that implements a binary search tree: `def insertion_sort(alist): for node in alist: if node.value > node.key: break node.left = insertion_sort(node.left) node.right = insertion_sort(node.right)` To be PEP-8-compliant, it would look like this: `def insertion_sort(alist): def insertion_sort_helper(node): if node.value > node.key: break node.left = insertion_sort_helper(node.left) node.right = insertion_sort_helper(node.right) for node in alist: insertion_sort_helper(node)` It's not necessary. It's good advice, but, like any advice, some programmers ignore it. They may use it, but they won't enforce it on themselves. Or, as a worst case, they'll write long, detailed, examples of why they didn't use it -- sorta like me. Here's an example. I find it helpful to keep source code in the same directory that I'm writing it in. That way, I don't have to move files around when I make changes, I don't accidentally change the wrong file, and I don't have any special problems with directories. So, I typically start my python files with this: `#!/usr/bin/env python` But, I don't know how to count lines of code yet. So, I cheat
