"In the Land Between the Gods, Goland, a young man lives. He's come back from the dead, and he's soon to marry the Princess who can't read or write. But at some point in the past, he was in love with a woman. That woman died. And the passage of time and the distance have separated Goland from his former love. He spends all day riding horses across the old fields and trying not to think about that woman and all the things he's lost. He knows he can't see her again

because he's buried up to his neck in the ground and everyone says she's dead. And she is. Once he wakes up, there's a wedding. Goland gets married to a beautiful woman named Xemima. His new wife is from the noble family, but they are so rich they don't even have to work for a living. To make matters worse, his new parents only allow him to keep the sword he was buried with. But when he takes it out he can see a woman in white. She disappears before his eyes. The day before the wedding, she shows up in front of the castle and says that the day has been stolen from them. The old man Goland worked for, his daddy, is busy with getting drunk and not helping his son's wedding. The little sister, Iso, goes to tell him what's going on and her daddy says he doesn't want to see what will happen at the wedding. And then he falls over dead. That night, Goland's mom comes with a bloody shovel and tells Goland to dig up his daddy's grave. Iso begs him not to do it, but he does. He puts the shovel in his hands and starts to move the dirt away. If he keeps moving, the shovel's blade will break, and the blade will hold Goland's hand back. If he leaves his hand on the ground, he will die, but he won't feel it. He keeps moving and the blade

breaks and a woman comes up from the ground with a sword in her hand. She kills his daddy, and he's grateful she saved him. He tries not to remember the rest." bff6bb2d33

(Previously, we set a default race for certain characters.) • Marksman characters have been buffed. • The Call of and Gathering of the Four Kings have been revised.Although the number of daily Internet and advertising users is steadily increasing, survey results show that the vast majority of them would rather the ads be displayed lower down on the page, closer to what they are actually looking at. For example, add a Classifieds ads. In fact, 72% of research teens think that pop-ups are a nuisance, while 73% said they are annoying. Similarly, spam email, instant messages, mobile phones and online shopping for family and friends take place at the same time. Only at this point, the relationship between the phone and the Internet becomes a significant problem: being connected 24 hours a day, the potential market reached. Can these users communicate with their friends across different time zones with their loved ones, their children, and a plethora of other problems that threaten us constantly? How to protect yourself and your computer? There are a number of ways to protect yourself from security attacks. 1. Make sure that your operating system be

**updated to the most recent version Open System and Software Management Center (5) | 7. Microsoft will tell you the current version of Windows you use. Download a patch file. Extract the file by WinRAR or WinZip. Drag the new folder to the installation directory in the games folder. Launch the game. Here you are: Note: In the case of WinRAR, right-click on the game exe and go to "Send to" to send the data to the installation folder of the gameQ: Performance of getting all values of an object from a List at once Imagine a method that returns an IEnumerable, and that contains a lot of MyObject instances. We want to get all the MyObject instances in a single LINQ query using the same trick as follows: IEnumerable MyObjects =...; IEnumerable CombinedObjects = MyObjects .Select(m => new MyObject { Foo = m.Foo, Bar = m.Bar, Baz = m.Baz, etc... }); With 10k objects, the 10k LINQ queries take 10s, while if we do them one by one by calling Select on each, they take 500ms. However, putting all the fields into an anonymous type as the second line still takes time. So, we tested the getter of each property of the anonymous type, but they are actually all optional: many of

them are lazy initialized and expensive to get. I'm guessing we're doing something wrong. The question is: how can we do this much faster? PS: The query is restricted to an IEnumerable, not to all the properties of the objects. PPS: To answer a comment: yes, all the properties are public. A: You could use the SelectMany extension method available in the framework. It can take a function as an argument and executes it once for each element
