[Rezz] "Elden Ring is a fantasy RPG that is currently being developed by the teams behind the well known fantasy action RPG that we all nd love, Final Fantasy Type-0. This is an exciting project to be a part of because everything is new and full of ial. It is still developing in a fairly open ended manner, and in the next few months the team is likely to ice the core RPG game play elements that will make up the game. I strongly encourage everyone to join the unity and take part in the development process, as playing the game becomes a lot more rewarding than playing the final product." [balinix] "One of the things that really blew me away with this game is the sis on the world. There are just so many unique things going on in this world that there is no way to possibly ence it all. It's obvious that the developers didn't just throw this world together and hope that players would I don't think a game studio can ever expect to draw in a large number of players if there is nothing unique aws them to the game. It's apparent that the concept of setting up a world that players explore, and then them experience all of the different aspects of it is something that the team at Aquria has been passionate for a long time. They've put so much work into creating a life-like and interesting world that it's no wonder ayers love exploring every little corner of it. That, and the fact that there's no way to become bored with the bff6bb2d33
