A new book is on the way that will possibly revolutionize the way you think about the history of science. Written by Richard Ambrosini, PhD, an award

winning historian of science,. A new book is on the way that will possibly revolutionize the way you think about the history of science. Written by Richard Ambrosini, PhD, an award winning historian of science,.Treatment of Edwardsiella ictaluri-mediated disease in channel catfish with 2-deoxy-D-glucose. Edwardsiella ictaluri infection of channel catfish (*Ictalurus punctatus*) was used as an experimental model to determine if induction of the glycolytic enzyme phosphofructokinase (PFK) could influence the outcome of disease. Injection of *E. ictaluri* into channel catfish caused severe ulcerative disease in channel catfish within two weeks. Total live weight gains of catfish used in the experiments was decreased by approximately 50%. Fish injected with *E. ictaluri* plus 2-deoxy-D-glucose (2-DG) had 40% lower salinities compared to fish injected with *E. ictaluri* alone. The

salinities of fish injected with *E. ictaluri* plus 2-DG was decreased to a similar level as for fish injected with *E. ictaluri* and supplemented with NaHCO₃ (pH 10.5) indicating an inability of these fish to regulate salinity. Trypan blue staining of the gills and spleen of *E. ictaluri*-infected catfish indicated that the disease was not due to capillary plugging. Histology of the kidney confirmed infection of the medulla. Fish injected with *E. ictaluri* plus 2-DG had a 99% mortality rate compared to the 40% mortality rate for fish injected with *E. ictaluri* alone. Immunological analyses indicated that 2-DG produced no effect on systemic humoral immunity.

However, catfish injected with *E. ictaluri* and 2-DG had 10-fold less PFK activity in the liver compared to controls. A similar phenomenon of decreasing PFK activity was seen in catfish injected with *E. ictaluri* and pyruvate (PYR) as a control

for the injection. The results indicate that addition of 2-DG or PYR to E. ictaluri-

Engineering: The laboratory â€“ PDF.The
fact that government has a Social
Security 'trust fund' built up to pay for
future benefits makes it hard to accept
that the program is solvent, given that
the trust fund is projected to run out of
money in 2019. According to the
Congressional Budget Office, by 2033
the government's retirement program
will have a cumulative net deficit of \$21
trillion. I know it's politically convenient
to blame every budget shortfall on the
former administration's spending. But its
successor's incoming budget still
projects a \$6.2 trillion deficit over the
next 10 years, and an additional \$7.8
trillion over the ensuing decade. Here's
a closer look at government spending.
It's already \$3.8 trillion more than it
would have been had Obama and the
GOP-
