Q: grep backreferences in bash string that contains both filepath and search pattern I have a bash script that searches for a specific pattern in a certain file, using grep. In my code, I want to write a function that, if the search pattern (called \$str) is found in a file, will use backreferences (\1, \2, \3, \4) to return the line of the file that contains the pattern \$str. The filepath is always from the very beginning of the script, which is: ./main.sh I have found this related question: grep 'string' and get backreferences However, this question is not exactly what I am looking for, as the search pattern is not necessarily a fixed string in the file but it depends on the specific file name, whereas what I want is a regular expression in a file. So, what I want to do is this: If \$str is found in ./main.sh, then return the line ./main.sh/filename. (For example, if I search for "aaa" in ./main.sh, then the result would be ./main.sh/aaa). I've tried the following code, but I don't know how to use backreferences in the pattern. if grep -q "my_str" main.sh; then echo "\$my_str" if grep 'my_str' ./main.sh; then echo "found" else echo "not found"

What's New in the?

The new Autodesk® AutoCAD® program supports the direct import of Windows® XP or higher-quality professional and high-quality-grade Windows® printers. Unlike Windows printers, professional printers are commonly used by professionals and top-quality-grade printers are used by those wishing to print files at high quality. To simplify the change from Windows printers to professional and high-quality printers, AutoCAD 2020 will be able to directly import files using Windows' higher-quality printers. In AutoCAD 2023, as the user opens an AutoCAD file that is saved in Windows format, and wishes to open it in AutoCAD, the file is automatically opened in AutoCAD, as a native Windows format file. In addition, you can easily open AutoCAD files created in Windows format and import CAD data for Windows users. Markup Assist: Markup Assist is a feature that automatically incorporates the experience of working with other team members while viewing an open drawing in AutoCAD. (video: 1:08 min.) In the markup assist feature, when the view changes, the drawing is automatically closed for the required session, so that the other team members can have access to the drawing and view the drawing together without any misunderstandings and unnecessary closing of the drawing. The markup assist feature can be turned off by unchecking the "Markup Assist" option on the "Options" page in the Preferences dialog box. Note: In AutoCAD 2023, when you open the drawing window, the display of an open drawing automatically closes so that the other team members can view the drawing. The markup assist feature is now available to reduce problems and make drawings more convenient. Symbol Library: In AutoCAD 2023, the Symbol Library allows you to define, store, and easily access symbols and other types of graphic objects. The Symbol Library in AutoCAD now supports the "Map" function, which is a tool that allows users to search for and access symbols. You can search symbols and categories from a map. In addition, the Symbol Library now supports the "Matte" function, which allows you to attach a background image to the symbol. Symbol Library: In AutoCAD, you can define and use symbols. Symbols can be categorized into symbol libraries. In AutoCAD, you can define the
